SUMMARY

Software Engineer with experience in Full Stack Development, Artificial Intelligence, and Geospatial Technologies. Proficient in building scalable web applications using Django, JavaScript, and SQL, with a strong foundation in Data Structures and Algorithms. Experienced in developing data-driven systems, integrating IoT solutions, and working with GIS and spatial data analysis. Founder and Chair of a 70+ member IEEE technical community, leading technical initiatives and collaborative projects.

EDUCATION

Babu Banarasi Das University

Lucknow, UP

Bachelor of Engineering in Computer Science & Engineering (Spec. in AI)

2022 – Expected 2026

- **Cumulative GPA:** 7.5/10;
- **Relevant Coursework:** Machine Learning, Neural Networks, NLP, Computer Vision, Artificial Intelligence, Deep Learning, Generative AI, and Data Structures & Algorithms.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, C, SQL, HTML5, CSS3
- **Frameworks & Libraries:** Django, React (Learning), NumPy, Pandas, Statsmodels
- **Developer Tools:** GitHub, VS Code, Azure, Google Cloud, Jupyter, QGIS, OpenVSP
- **Core CS:** Data Structures & Algorithms (DSA), Operating Systems, Internet of Things (IoT), System Design, Remote Sensing & GIS

SOFTWARE DEVELOPMENT EXPERIENCE

Winter Internship – India Space Lab | Technical Trainer

Feb 2026– March 2026

- Performed spatial analysis, network analysis, and site suitability modeling using QGIS, including shortest path and service area analysis on road networks.
- Created and managed GIS spatial databases by digitizing raster maps into vector layers and linking spatial and attribute data for geospatial analysis.

Zidio Development | Software/ML Intern

July 2024 – Oct 2024

- Architected a scalable Recommendation System with enhanced security protocols for user data protection.
- Developed a Digit Recognition engine using HOG and Zernike moments, integrating complex mathematical models into a functional software interface.
- Implemented real-time data processing for a Speech Emotion Recognition system using MFCCs.

CipherByte Technologies | Data Science & Software Intern

March 2024 – April 2024

- Built an NLP-based Spam Detection system for email classification, focusing on backend logic and accuracy.
- Integrated time-series forecasting models to visualize economic patterns within a web-based dashboard.

REXai | AI Software Engineer

Nov 2023 – March 2024

- Optimized model scalability and technical implementation for AI-driven enterprise solutions.
- Collaborated on backend logic to ensure efficient data flow between ML models and user interfaces.

KEY PROJECTS

Aircraft Modeling using OpenVSP – Drone & Aerospace Project

- Recreated the Cessna 210 (NASA variant) using OpenVSP, constructing fuselage, wings, tail, and propeller components through parametric modeling.
- Interpreted 3-view aircraft drawings and applied geometric parameters such as span, chord, sweep, taper ratio, and dihedral to generate a complete 3D aircraft model.

Smart Bin: Full Stack IoT Solution

- Developed an automated waste segregation system using Arduino, sensors, and servo motors.
- Built a web platform to promote waste management awareness and support income opportunities for ragpickers.

LEADERSHIP & RECOGNITION

- **Founder & Chair | IEEE Student Branch, BBDU:** Established the chapter and managed the TechXplore project exhibition and IDEATHON (70+ teams).
- **Recipient, IEEE SPS UP Chapter Student Award 2024:** Awarded for exemplary technical leadership and growth of the student branch.

CERTIFICATIONS

- **Advanced HTML 5 Courses** (Udemy);
- **Natural Language Processing** (Infosys Springboard);
